halten, fir, to forward the whole to von. I regretting that the patriot Dombey could not cripy, the honor of fulfilling his miffor and of communicating perhaps fome intractions in detail, interesting to the legrard, to whom you may confign the ex-

amination of the new ly flem.

To you, is, I shall not diffemble, that as to myself I see in the adoption of the new meafures by America, a mean of cementing the political and commercial con-pexions of the two nations. I fee, more over, therein, a great flep towards the de-frection of those costoms, more or less ab-fired and arbitrary, which shackle the relations of nations with each other. Per fnaded that the government takes an equal interest itself in both these objects, I cannot entertaln a doubt of its fanctioning with its authority the introduction of the

new method.

If you defire, fir, to avail vonrielf of the infractions about to be prepared by order of the national convention, in order to fa-cilitate in practice the use of the new infirements, and the understanding of their relation to the old, I shall with pleasure underrake to make an express application for them in France.

Accept, fir, my effeem,
JH. FAUCHET.

DECREE of the committee of public fafety of the national tompention, on the 21st day of the national tompention, on the 21st day of the national frimatic, 2d year of the French republic, one and indivigible. (11th

tember, 1793-1 The committee of public fafety, con fideling that it may be important to make known to the people with whom the re public may have relations, the new fyflem of weights and meafures, which it has

THAT the board of weights and meaf-ures cause to be fent to citizen Dombey, who departs for North America, a meafure in copper, and the weight divided in the form decreed for the flandards, the expenfe of which fall be defrayed out of the funds ailotted to this work.

Done at Paris the 21ft frimaire, 2d year

of the French republic, one and individ-ble. (Signed) in original, Robelpierre, Carnor, C. A. Prienr, Barrere, Billand Varences, and R. Lindet.

Extraft (figned) C. A. PRIETE, CARNOT, R. LINDET, and BILLAUD VARENNES

JH. FAUCHET.

Paithfully translated from the original- by
GEO, TAYLOS, June.

TRANSLATION.

The brand of meights and mentars, in execu-tion of a detree of the committee of public fafety, has transmitted to citizen Dombey, jajety, an transparten and a weight decim ally divided, both being tenfermable to flandords which will from be in use through. cut the republic.

According to the decrees of the national

convention, our measure ought to be equal to the ten millionth part of the 4th part of a terrestrial meridian, which is the unit taken in nature, to which all our measures are referred, and our weight ought to be equal to the weight of a cohir measure of diffilled water, having for its fide the tenth part of the measure (this water being sup-pased to be weighed in the open air, and in the temperature of melting ice.)

We already know very nearly the length of the 4th part of a meridian, from the measures of feveral terrefitial ares, made measures of several terreficial arcs, made in the last and present century, by different aftronomers. It results from these measures, that the 45th degree of latitude contains 57,027 tottles of France; now, in supposing the earth to be an eliptical spheroid of fmall eccentricity, the 45th degree is very nearly the mean retto between all the other degrees; it will hence follow, that by multiplying 57 027 toiles by 90 we shall have the length of the 4th part of a meridian, which will be found equal to 5/152-450 toiles and consequently its ten millionth part, in which the mensures will be equal to 3 French feer, 11 ligns, 44 100. mination does not exceed the tenth of a

Note. * In like mamer, if we meafure

The terrefirial are contained betrafen Dun-kirk and Parcelma, subject the doord of sweights and measures it instruded to measure in order to ascertain the length of the meridito give to accertain the tragits of the meridien, in france to be devided into two parts, by
the 45 degree—in fail, the two parts are
ext spand, but they differ is little, that the
sairs of the sect to which am attention is
contant to recate whether are attention is
contant to recate whether are attention is
to acceed by the right.

The flanderd of the meafure Ers bem ! regulated by this precife length of three French feet, 11 ligns, 44-100, to the tem-perature marked by 10 of the thermomeper of Resumer, or 540.2 of that of Far-enheit, which is the conflant temperature observed, either in summer or winter, in

be cellars of the observatore of Paris The flandard of weight has been dierniaed from experiments on the weight of diffilled water, made by the board of weights and measures, and referring the volume of the body, which was used in the experiments, to the cubic meafure, which has for its fide the tenth part of the men-

fore. Although the determination of thefe two models be already of more than foffi-cient exactness for the ordinary necessities of commerce, fill however it is regarded as providery only, and the investigation will not be definitively decreed until the menfore of the terreffrial are which is non making, that the effectively accomplished, It is hoped that this measure which comprehends nine degrees and a half of the meridiar, and which is the greated operation of the kind that has been undertaken, will be a made that the state of the kind that has been undertaken, will be a made that the state of the kind that has been undertaken, will be completed by the end of this year fixed, as well as the weight of the unit of weights, the provious models will be con-rected, if they require it, and shall be exeented in Platina, other models which will be fent to the serious with whom France may be connected in commerce—these models that I be absolutely similar to those which are to be preferred in the place of refidence of the national affembly and the idearity fuch as that each nation may re gand those the politiles as the prototypes o

all the others.

The flandard of meafore and that of weight are divided into decimal parts.
This fyftem of division, which is uniform
and similar to that of our arithmetical scale, will be ellablified generally in all kinds of meafures—in those of length, superficies, and of capacity, as well as in weights and money, and in fhore is all ronomical, geo-graphical and nautical meafores.

Already our livre fournois or numerical livre is divided into dimes and cents, and he enblic accounts will immediately be the four authors which are coined, are equally subject to this lystem, and are de-

cimal parts of the weight.

As to measures which interest the scien ces, the decimal division has been except ed in the inflrements which are used to tween Dunkirk and Barcelona. In their inflroments the 4th of the circle is divider into too degrees, the degree into 100 ninotes, and the minute into 100 feconds, It is also attempted to reduce all the affro-nomical tables to the new division.

In like manner alironomical clocks di-vided into decimals have been made. The whole length of the day from one midnight to the other, is divided into 10 hours; the hour into 100 minutes, and the minute into 100 feconds, which make each day to confid of one bendred thousand feconds, inflead of \$6,400 as formerly computed, fo that the new ferned will he but about 6 7 of theancient, and the length but about 6 7 of the ancient, and the lengtu of the new pendulum for fetcher will be equal to ani 300. 71i. inflead of 30i. 8ii. 4. Several pocker warcher have been made according to the decimal division, and in there the division of years decreed by the national convention adheres as nearly as offible to this new fyllem.

True copy, JH. FAUCHET.

DREADFUL FIRE.

By a veffel arrived at Norfolk, letters are received in Philadelphia from New Orleans, containing intelligence, that a confiderable part of the town was defined by a dreadful conflagration that broke out on the 8th December, in the must improved and opulent part of the city, which experienced a like calamity but a few years sgo. It is sepposed that 400 buildings, including a magazine of powder, has been consumed by this disafter.

LONDON, Nov. 18.

In the midfi of our prefest embarraff-mental it mult give great fatisfaction to our commercial readers to be informed, that the differences between this country and America are at length finally adjusted. The following are the leading terms of

the arrangement : The polls which have been remined by the British fince the last treaty of Peace,

eighteen months.

A commercial interconses is to take west ladies, et a low duty on tonnage,

And the important question whether neutral bottoms make free ships is to be referred to Commissioners, who are to make their report at the end of two years.

Government has at length thought pro-per to take up the originos, and so long reprobated business of the forged Assignats. Upwards of 80 foreigners concern ed in this infamous traffic, are now in cultody of different Mellengers, prepara-tory to their being fear out of the king dom, ender the authority of the Alico Bill.

Yesterday arrived the mail from Hol-and; and also a servant from his Royal Warjaw. The fource of the shave par-ticulars is Rufflan, we may therefore hope, that we fee in them the worlt fide of the highness the duke of York, with dispatches to Government. He left the Head-Quarters at Arnheim, on Friday last.

The news received yesterday is of very

confiderable importance. We learn that a Truce has been figured between the Duke of York and the French General, commanding on the Wall, that the troops hould not moleft each other; and in confiderable of their contract of their thould not motest each other; and fuguesce of this agreement, both armirifuguesce of this agreement, both armirifuge per properties. The Betith Head Quarters remainst Arebiem; those of the Hereditary Prince of the Heredit Orange, at Gorcom: and those of his Brother, Prince Frederick, at Amerongem.

country fear of Count Athlone. The news from France is not left inter cfting: and we find that the mederate par-ty has jeft obtained another victory over that of Terror. The Convention has that of Terror. The Convention car passed a decree permitting such Emigranas as have not botne arms against the Repub-lic, to return to their professions in Frager, and praceably to re-assume their former professions. This measure is the most professions. This measure is the most driking proof we have yet had of the pro-gress of maderation in that country; and the advancement of the French Revolution

towards force fort of regular Government.
This decree, added to the faspension of
arms which has taken place on the Waal, and forme diffries on the Rhine, may he confidered as an happy omen of returning tranguillity,
We underfland that Mr. Jay is about to

fet out from this country to Paris, on bu-finels of very great importance to this king-dom, and to all Eurape.

A letter has been received by the Sa-pteine Council at Warfaw, from General

Kofciusco, who stares, that he is allowed proper medical assistance, and its his wounds are healing.
November 26.

November 26.

By an American thip arrived from L'Orient we learn that there are now on the
flocks at that place, three thips of 84 gams. two of 75, and three frigures. All thefe were land down only in August last, and the builders have contracted that they shall be ready for fex in April next, or they will forfeit their heads. . It appears from the different depositions

of the Switzerian to converted temporary and about 5 o'clark in the afternoon the the trial of the 14 members of the Redon is partial of the 14 members of the Redon is partial marky opposite to the north part tinnary connection of the city, that the 'of this city, and moved, it one body, down number of persons who have died in prison to the point below. HARTFORD, February 2.

On Thursday gight of the last week, was After a lowering day, on Thursday, the evening. It begin to fall moderately, and considered to increase in violence, until a-hour 3 or balf after 3 in the morning; at winen time, the wine, which was at footheaft, had increased to the fact and violence of a Well-Indian horricane, and feemed to thecaten universal roin. The roaring of the wind in the atmosphere, was terrible, and it appeared as if all the elements were in a fermentation. Several barns, and imaller buildings in this city, and in its neighbourhood, were totally demolifi-ed; a number of houses, and out houses. at a number of hoofes, and out houses, and a constant of hoofes and a constant of the commands, were partly, or wholely unroofed, or blown of the constant of great rapidity; and, by the fory of the wa-ter, and the great bodies of ice, we are in-formed that Weetang, and New-Hartford bridges are entirely (wept away. It is sery probable, that this is but a fmall part of the damage which was done, though we have not, hitherto, heard of any more. On Saturday morning the water in Con-

neclicat river was oblighted to rife. It continued to rife rapidly chronel the day. continued to rife rapidly carough the day and, shour 5 o'clock in the afternoon the

remarked to confider and report the expedi-ency of fulpending the fale of Eaftern lands—and in the mean time the commit-tee for the fale of Eaftern land he directed

not to proceed in the fale of these lands.

An order came down from the Hou. Senate, directing the committee for the fale of Eastern lands to approach to complete the contracts which they have already made, any order to the contrary notwithfanding, which was read and concurred.

A hill came down from the Hon. Sen ate, providing for the support of poor prisoners, confined in goal for crimes and of-fences against the Communewalth.
